Servlet Mapping

Servlet Mapping:

- Annotation-based Mapping: Using @WebServlet("/hello") for automatic URL mapping in external Tomcat.
- **Manual Mapping**: In embedded Tomcat, use methods like addServletMappingDecoded() to associate URLs with specific servlets.

Manual Mapping for Embedded Tomcat:

```
Context context = tomcat.addContext("", null);
tomcat.addServlet("HelloServlet", new HelloServlet());
context.addServletMappingDecoded("/hello", "HelloServlet");
tomcat.start();
tomcat.getServer().await();
```

Output:

```
INFO: Starting service [Tomcat]

Dec 14, 2023 11:12:18 AM org.apache.catalina.core.StandardEngine startIntern INFO: Starting Servlet engine: [Apache Tomcat/8.5.96]

Dec 14, 2023 11:12:10 AM org.apache.coyote.AbstractProtocol start INFO: Starting ProtocolHandler ["http-nio-8080"]

In Service

Solocalhost:8080/hello x +

C ↑ O localhost:8080/hello
```

Custom Port Configuration:

tomcat.setPort(8081) changes the default port from 8080.
